Advisory Action Before the Filing of an Appeal Brief

Application No.	Applicant(s)		
09/238,163	SUMIYAMA ET AL.		
Examiner	Art Unit		
Joseph R. Pokrzywa	2622		

	Joseph R. Pokrzywa	2622					
The MAILING DATE of this communication appears on the cover sheet with the correspondence address							
THE REPLY FILED 04 April 2005 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.							
1. The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, whice places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:							
a) The period for reply expires 3 months from the mailing date of the final rejection. b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In n.							
event, however, will the statutory period for reply expire later th Examiner Note: If box 1 is checked, check either box (a) or (b) MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f							
Extensions of time may be obtained under 37 CFR 1.136(a). The date on been filed is the date for purposes of determining the period of extension a CFR 1.17(a) is calculated from: (1) the expiration date of the shortened standove, if checked. Any reply received by the Office later than three month earned patent term adjustment. See 37 CFR 1.704(b). NOTICE OF APPEAL	and the corresponding amount of the fee.	The appropriate extension final Office action: or (2)	on fee under 37 as set forth in (b)				
 The Notice of Appeal was filed on A brief in com of filing the Notice of Appeal (37 CFR 41.37(a)), or any e Since a Notice of Appeal has been filed, any reply must be compared to the com	xtension thereof (37 CFR 41.37(e)), to avoid dismissal o	of the appeal.				
AMENDMENTS	рене с		-).				
3. The proposed amendment(s) filed after a final rejection, (a) They raise new issues that would require further co (b) They raise the issue of new matter (see NOTE belo (c) They are not deemed to place the application in belo	nsideration and/or search (see NO w);	TE below);					
appeal, and/or (d) They present additional claims without canceling a		jected claims.					
NOTE: (See 37 CFR 1.116 and 41.33(a)).							
4. The amendments are not in compliance with 37 CFR 1.121. See attached Notice of Non-Compliant Amendment (PTOL-324). 5. Applicant's reply has overcome the following rejection(s):							
 Newly proposed or amended claim(s) would be a the non-allowable claim(s). 	llowable if submitted in a separate	, timely filed amendm	ent canceling				
7. For purposes of appeal, the proposed amendment(s): a) how the new or amended claims would be rejected is pro The status of the claim(s) is (or will be) as follows: Claim(s) allowed: Claim(s) objected to: Claim(s) rejected:		ill be entered and an	explanation of				
Claim(s) withdrawn from consideration:

DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments filed 4/4/05 have been fully considered but they are not persuasive.
- 2. In response to applicant's arguments regarding the rejection of claim 1, which was cited in the Office action dated 1/7/05, as being unpatentable over Hirata *et al.* (U.S. Patent Number 5,113,520) in view of Ohta (U.S. Patent Number 5,448,376), whereby applicant argues on pages 1 and 2 that Ohta fails to teach of storing image forming conditions in the ROM 11, since Ohta teaches of storing information concerning "candidate images" which are to be identified and deleted from image data. Because of this, applicant argues that Ohta fails to teach of causing the output unit to output image data newly input from the image input unit after the discarding of image data from the first memory under the maintained image forming conditions.

Currently, claim 1 requires "a second memory for storing image forming conditions", and "an image output unit for printing the image data stored in the first memory under the image forming conditions stored in the second memory". Thus, "image forming conditions" are defined by the requirement of "printing the image data under the image forming conditions". Thus, using a broad, reasonable interpretation of the term "image forming conditions", one can recognize that Ohta's standard geometry parameters stored in the ROM 11 can, in fact be image forming conditions. In Ohta, image data that is printed out is done so "under the image forming conditions stored in the second memory", as image data is printed "under the condition" that it

Art Unit: 2622

does not match the data stored in the second memory. Because of this, it can be recognized as an image forming condition.

Continuing, the primary reference of Hirata teaches of each of the limitations, including an output control means for causing the output unit to output image data newly input from the image input unit under the maintained image forming conditions, as read in column 4, lines 37 through 57, wherein as seen in Fig. 3B, at step S260, when an execute print key is pressed, image data which was newly input by the image input unit, noted as the keyboard 10, is printed during the printing routine in step S290. However, Hirata does fail to expressly disclose of outputting image data newly input from the image input unit after the discarding of image data from the first memory under the maintained image forming conditions. Ohta is being utilized to teach this feature. Particularly, Ohta teaches of means for causing an output unit to output image data newly input from the image input unit after the discarding of image data from the first memory under maintained image forming conditions, as read in column 8, lines 3-41.

With this, it would have been obvious to a person of ordinary skill in the art to consider Hirata's system to output image data newly input from the image input unit after the discarding of image data from the first memory under the maintained image forming conditions, as recognized by Ohta. The suggestion/motivation for doing so would have been that Hirata's system would become more efficient with the addition of Ohta's teachings, since image forming parameters would not need to be reloaded for each newly input image, as recognized by Ohta in column 1, line 37-column 2, line 59. Therefore, it would have been obvious to combine the teachings of Ohta with the system of Hirata to obtain the invention as specified in claim 1.

Application/Control Number: 09/238,163 Page 4

Art Unit: 2622

3. Therefore, the rejections of independent claim 1, as well as independent claims 10, 16, and 19, cited in the Office action dated 1/7/05 as being unpatentable over Hirata et al. in view of Ohta, are maintained.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joe Pokrzywa whose telephone number is (571) 272-7410. The examiner can normally be reached on Monday-Friday, 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward L. Coles can be reached on (571) 272-7402. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
